Subject: Exciting developments at LVX System

LVX System is the inventor and innovative leader in the fast-emerging Visible Light Communication (VLC) and Light Fidelity (Li-Fi) market. LVX technology uses cost-effective LEDs to send and receive data by modulating the same photons that are used for lighting. By combining illumination with secure wireless communication, LVX provides a more affordable and secure solution to traditional radio waves and Wi-Fi.

VLC technology is advancing to the next stage of development which entails bringing this patented technology to a broad marketplace. In North America this new market is anticipated to reach a valuation of \$60 billion by 2022.

Al Nagy was recently elected board chairman of LVX System to oversee this phase. Nagy's background in building successful businesses offers a unique perspective in strategic planning that aligns well with the operations and systems needed to maximize the impact of LVX technologies.

"Over the past six months, I've been fortunate to work alongside Felicity-John and the LVX team," said Nagy. "That experience has given me great confidence in the team's ability to effectively monetize LVX System's patented technologies."

LVX technologies are the freeway to future data routing. Just as cell phones evolved into smartphones, the roadmap for future VLC driven applications is practically infinite. VLC will maximize the potential of the Internet of Things (IoT), empowering the securely connected home and industry. As the pioneer and foundational VLC patent holder, in this new frontier of communication through light photons, LVX is poised to monetize this proprietary research into billions of dollars of recurring revenue.

As we enter this next phase for LVX we invite you to get involved. Together, we can all achieve more, and partnerships on multiple fronts are essential to our long-term success. [Click here to learn more.](#)

ABOUT: *LVX System is the inventor and innovative leader in the fast-emerging Visible Light Communication (VLC) and Light Fidelity (Li-Fi) market. As the pioneer and foundational VLC patent holder, in this new frontier of communication through light photons, LVX is poised to monetize this proprietary research at an exponential rate of recurring revenue.
